PROFILE

- MSc Cloud Computing student at National College of Ireland, graduating August 2026, with a B.Tech in Information Technology, and three internships in backend development and cloud infrastructure.
- Built and shipped distributed backend systems, serverless pipelines, and AI integrated applications using Python, Django, REST APIs, Redis and AWS.
- Published research on IEEE Xplore and solved 190+ LeetCode problems alongside my degree, sharpening my problem-solving, debugging, and technical communication skills.
- Work part-time as a cleaner at BoyleSports while studying full-time, which has built my reliability, time management, and ability to perform consistently as part of a team under pressure.

SKILLS

Software Engineering	Python, OOP, DSA, Django, REST API, PostgreSQL, CI/CD, GitHub, Redis, Celery, Kafka, unit testing, pytest, Codex, Lovable, Claude
Cloud and Networking	AWS (Lambda, S3, DynamoDB, EC2, CloudWatch, Elastic Beanstalk, ElastiCache, SageMaker), Kubernetes, Docker, Linux, Networking fundamentals
Development Practices	Agile Development, Debugging, Troubleshooting, Monitoring, Problem Solving
Soft Skills	Communication, Teamwork, Time Management, Adaptability, Quick Learner
Certifications	Microsoft Certified:Azure Fundamentals , AWS Partner:Technical Accredited , AWS Partner:Containers on AWS (Technical)

EDUCATION

MSc in Cloud Computing , National College of Ireland	Sept 2025 - Aug 2026
Relevant Coursework: Cloud Architectures, Cloud DevOpsSec, Scalable Cloud Programming	
Research Project - Intelligent Multi-Cloud LLM Serving: A Cost aware Kubernetes Framework	
B.Tech in Information Technology , DJ.Sanghvi College of Engineering	June 2021 - May 2025
Minors in Data Science	
Relevant Coursework: OOP, DSA, Operating Systems, DBMS, SQL/NoSQL, Software engineering principles	
Research project - Multilingual Minutes of Meeting Generator on IEEE Xplore	

PROJECTS

Conqur – Django, GeoDjango, PostGIS, Docker, REST APIs, PostgreSQL, [GitHub](#)

- Built a territory conquest game where runners claim land by tracing GPS loops using PostGIS geometry operations to handle spatial claim and capture logic with accurate area calculation.
- Designed 9 REST API endpoints covering territory submission, shield activation, leaderboard ranking, friend requests, and private group worlds, supporting the complete game loop end to end.
- Containerised the full stack with Docker Compose so the entire app PostGIS, migrations, and demo data starts with a single command, no local database setup needed.
- Shipped a complete full-stack product including a notification feed, QR-based friend adding, and per-user progression with badges, coins, and streaks.

RunFog Dublin (Fog and Distributed System) – Django, SQS, Lambda, EventBridge, [GitHub](#)

- Designed a fog computing simulation where virtual nodes handle sensor ingestion, batching, and processing independently with configurable failure modes to test how the system behaves when nodes go down.
- Built an SQS + Lambda + EventBridge pipeline to decouple telemetry ingestion from processing, which brought latency down compared to handling everything synchronously.

- Developed a Django dashboard that polls for updates in real time, showing anomaly detection results and the health of each node.

Luna_WebBrowser_Agent – DjangoRestFramework, Celery, Redis, Whisper STT, LLMs, AWS, [GitHub](#)

- Built the backend in Django REST Framework around a modular design reminders, automation, user management each lived in their own module.
- Pushed long-running tasks into Celery workers with Redis as the broker so the API could respond immediately instead of making the user wait.
- Plugged in Whisper for speech-to-text and an LLM for response generation, with logging at every handoff point so when something went wrong you could actually tell which stage failed.
- Set up the task queue so that scaling meant just running more Celery workers nothing in the application code needed to change.

EXPERIENCE

AWS Cloud Intern

June 2025 - Aug 2025

F13 Technologies

Delhi, India

- Built and deployed serverless backend services across 5 projects using Python and AWS Lambda, implementing the core backend logic within the intern group and presenting the final solutions to the wider engineering team.
- Configured AWS CloudWatch dashboards and alarms for 3 services, cutting average issue detection time to under 15 minutes through proactive alerting.
- Automated a release process that previously took 6 manual steps down to a single command using Python, Elastic Beanstalk, and AWS.

Centre of Excellence Intern

June 2024 - Aug 2024

Anunta - Cloud Based VDI Services

Mumbai, India

- Sat in on client requirements meetings conducted over Teams, learning how enterprise VDI solutions are scoped, communicated, and delivered in a real consulting environment.
- Completed hands-on networking labs covering DHCP, DNS, TCP/IP, and subnetting, building practical fundamentals that directly support cloud and backend infrastructure work.
- Self-studied and passed the Microsoft Azure AZ-900 certification within 3 weeks alongside daily responsibilities, driven entirely by personal initiative.

Software Developer Intern

Aug 2023 - Oct 2023

Anunta - Cloud Based VDI Services

Chennai, India

- Built an end-to-end news extraction pipeline using Python, Angular, and MS SQL, processing articles from 5+ sources into a structured database for downstream consumption.
- Reduced average bug resolution time by 30% by introducing a systematic log debugging approach.
- Participated in weekly code reviews, incorporating feedback across 3 sprint cycles to improve code quality and consistency.

ACHIEVEMENTS AND LEADERSHIPS

- **IEEE Publication:** Published research on a multilingual AI meeting transcription system at ICFT 2025, ([IEEE Xplore](#)) one of 60 papers accepted from global submissions, focusing on automated speech processing and structured information extraction.
- **Hackathon:** Ranked Top 10 of 54 teams in webdev hackathon, delivering under tight deadlines, while adapting to changing requirements.
- **Leadership:** Led 50+ team members across content, outreach, and know-how initiatives, improving digital engagement by 40% demonstrating project management and ownership.
- **Programming:** Actively solving LeetCode problems focused on pattern-based problem solving, strengthening SWE fundamentals.
