

RONAK RAJPUT

0894313810 ✦ Dublin, Ireland

ronakrajput.ire@gmail.com ✦ [Portfolio](#) ✦ [LinkedIn](#) ✦ [GitHub](#) ✦ [LeetCode](#)

PROFILE

- Solved 170+ LeetCode problems and published research on IEEE Xplore, bringing algorithmic depth and real-world problem solving to every project.
- Built and shipped backend systems using Python, Django, and REST APIs, integrating async processing, AI pipelines, and cloud services across 4+ projects.
- Strong CS foundations in data structures, OOP, distributed systems, and Linux applied through internships at two cloud firms and a CI/CD focused projects.
- MSc Cloud Computing student at National College of Ireland, with hands-on experience writing, debugging, and deploying production-quality code end to end.

SKILLS

Software Engineering	Python, OOP, DSA, Django, REST API, PostgreSQL, CI/CD, GitHub, Redis, Celery, Codex, Lovable, Claude
Cloud and Networking	AWS (Lambda, S3, DynamoDB, EC2, CloudWatch, Elastic Beanstalk, ElastiCache, SageMaker), Linux OS, TCP/IP, DNS, DHCP, Subnetting, OSI Model, Operating Systems
Development Practices	Agile Development, Debugging, Troubleshooting, Problem Solving
Certificates	Microsoft Certified:Azure Fundamentals , AWS Partner:Technical Accredited , AWS Partner:Containers on AWS (Technical)

EDUCATION

MSc in Cloud Computing , National College of Ireland Relevant Coursework: Cloud Architectures, Cloud DevOpsSec, Scalable Cloud Programming, Data Governance, Compliance and Ethics, Research Project	Sept 2025 - Aug 2026
B.Tech in Information Technology , DJ.Sanghvi College of Engineering Minors in Data Science	June 2021 - May 2025

EXPERIENCE

AWS Cloud Intern F13 Technologies	June 2025 - Aug 2025 <i>Delhi, India</i>
• Built and deployed serverless backend services across 5 projects using Python and AWS Lambda, reducing manual processing overhead by eliminating server provisioning steps for 3 recurring workflows. • Configured AWS CloudWatch dashboards and alarms for 3 production services, cutting average issue detection time from 2 hours to under 15 minutes through proactive alerting. • Automated a deployment workflow using Python and AWS services, reducing a previously manual 6-step release process to a single-command execution.	
Centre of Excellence Intern Anunta - Cloud Based VDI Services	June 2024 - Aug 2024 <i>Mumbai, India</i>
• Documented 8+ enterprise VDI architecture discussions into structured internal learning resources, adopted as onboarding references for new team members. • Built hands-on lab exercises covering DHCP, DNS, TCP/IP, and subnetting that were used across 2 internal training sessions.	

- Completed Microsoft Azure AZ-900 certification within 3 weeks of joining through self-directed study alongside daily responsibilities.

Software Developer Intern

Anunta - Cloud Based VDI Services

Aug 2023 - Oct 2023

Chennai, India

- Built an end-to-end news extraction pipeline using Python, Angular, and MS SQL, processing articles from 5+ sources into a structured database for downstream consumption.
- Reduced average bug resolution time by 30% by introducing a systematic log-and-config-first debugging approach adopted by the team.
- Participated in weekly code reviews, incorporating feedback across 3 sprint cycles to improve code quality and consistency.

PROJECTS

RunFog Dublin (Fog and Distributed System) – Django, SQS, Lambda, EventBridge

- Designed a distributed fog computing simulation handling sensor ingestion, batching, and processing across multiple virtual nodes.
- Built event-driven backend pipelines using AWS SQS, Lambda, and EventBridge for asynchronous telemetry processing and persistence.
- Developed real-time Django analytics dashboard with polling-based updates for anomaly detection and system monitoring.

Luna_WebBrowser_Agent – DjangoRestFramework, Celery, Redis, Whisper STT, LLMs, AWS

- Built Django REST backend for assistant workflows (reminders, automation, user management) supporting 5+ workflow modules via modular API design.
- Improved responsiveness by reducing synchronous delays using Celery and Redis for asynchronous task execution.
- Designed AI pipelines integrating Whisper STT and LLMs with structured logging across multiple workflow stages for traceability.

SmartTrack Trip Planner – Lambda, S3, SSM, DynamoDB, Django, REST APIs, CloudWatch

- Built scalable backend services integrating 4+ external APIs using AWS Lambda, S3, SSM, and DynamoDB.
- Improved reliability with 40% fewer runtime errors through structured logging and error handling across backend systems.
- Enhanced debugging efficiency by analyzing logs and AWS service interactions for faster issue resolution.

ACHIEVEMENTS AND LEADERSHIPS

- **IEEE Publication:** Published research on a multilingual AI meeting transcription system at ICFT 2025, ([IEEE Xplore](#)) one of 60 papers accepted from global submissions, focusing on automated speech processing and structured information extraction.
- **Hackathon:** Ranked Top 10 of 54 teams in a UI/UX hackathon, delivering under tight deadlines, while adapting to changing requirements.
- **Leadership:** Led 50+ team members across content, outreach, and know-how initiatives, improving digital engagement by 40% demonstrating project management and ownership.
- **Programming:** Solved 170+ LeetCode problems focused on data structures, algorithms, and pattern-based problem solving actively strengthening SWE fundamentals.
